

Comment prouver la sécurité d'un protocole cryptographique?

Une approche académique

Pascal Lafourcade

*Chaire industrielle,
Confiance numérique*

16 Octobre 2014

Objectifs de la Chaire de Confiance Numérique

Mise en place d'une activité de recherche traitant des aspects de la Confiance Numérique autour de la fiabilisation et de la sécurisation des systèmes et des services informatiques

- ▶ Pérenne
- ▶ Visible

Activité de recherche:

- ▶ Impulsée par almerys et la Caisse d'Epargne d'Auvergne et du Limousin via la Fondation de l'Université d'Auvergne
- ▶ Soutenue par le Région Auvergne
- ▶ Développée au LIMOS

Objectifs de la Chaire de Confiance Numérique

- ▶ Recrutement d'un enseignant chercheur spécialiste du domaine qui sera le pivot nécessaire au démarrage et l'installation de cette activité
- ▶ Organisation d'une réflexion sur les actions de formation à mener des actions de dissémination et de transfert de technologies (Workshop, Projets ANR FUI,...)
- ▶ Mise en place et animation d'un groupe de réflexion et d'un séminaire pour échanger sur cette problématique

<http://confiance-numerique.clermont-universite.fr/>

<http://confiance-numerique.clermont-universite.fr/>

- ▶ Chiffrement (compltement) homomorphe : de la théorie à la pratique
- ▶ Enjeux et impacts juridiques du chiffrement homomorphe
- ▶ Combinaison d'analyses statiques pour l'aide à la détection et à l'exploitabilité de vulnérabilités dans du code binaire
- ▶ Keep calm and change your password
- ▶ Authentication Using Pulse-Response Biometrics
- ▶ Security issues and Directions of Intelligent Transport Systems within limited-resources constraints
- ▶ IoT: Internet of (Insecure) Things
- ▶ Signature électronique et identité numérique : les ingrédients indispensables pour développer la confiance sur Internet.
- ▶ Primitives et constructions cryptographiques pour la confiance numérique.
- ▶ Je sais tout sur vous grâce au Wi-Fi!
- ▶ Vers un carte d'identité respectueuse de la vie privée.
- ▶ Identifiants et guesswork.
- ▶ Les nouvelles armes de James Bond.
- ▶ Virus dans une carte mythe ou (proche) réalité ?
- ▶ La confiance numérique, de l'autre côté du miroir...
- ▶ Comment avoir confiance dans les applications numériques ?
Les méthodes formelles à la rescousse.
- ▶ Comment remettre l'internaute au centre des échanges ?

Séminaire Confiance Numérique

Prochain Séminaire

- ▶ 14 Novembre 2014, 14h00 : by Jordy Herrera.

Is bitcoin a suitable research topic?

- ▶ Live et replay sur la web TV de l'UDA.
- ▶ pascal.lafourcade@udamail.fr

Séminaire Confiance Numérique

Prochain Séminaire

- ▶ 14 Novembre 2014, 14h00 : by Jordy Herrera.

Is bitcoin a suitable research topic?

- ▶ Live et replay sur la web TV de l'UDA.

1st Symposium on Digital Trust in Auvergne

3 et 4 Décembre 2014 à Clermont-Ferrand

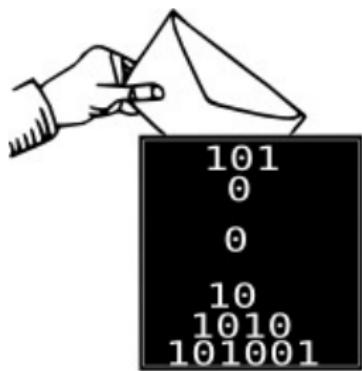

confiance-numerique.clermont-universite.fr/SDTA-2014

My Research Topics

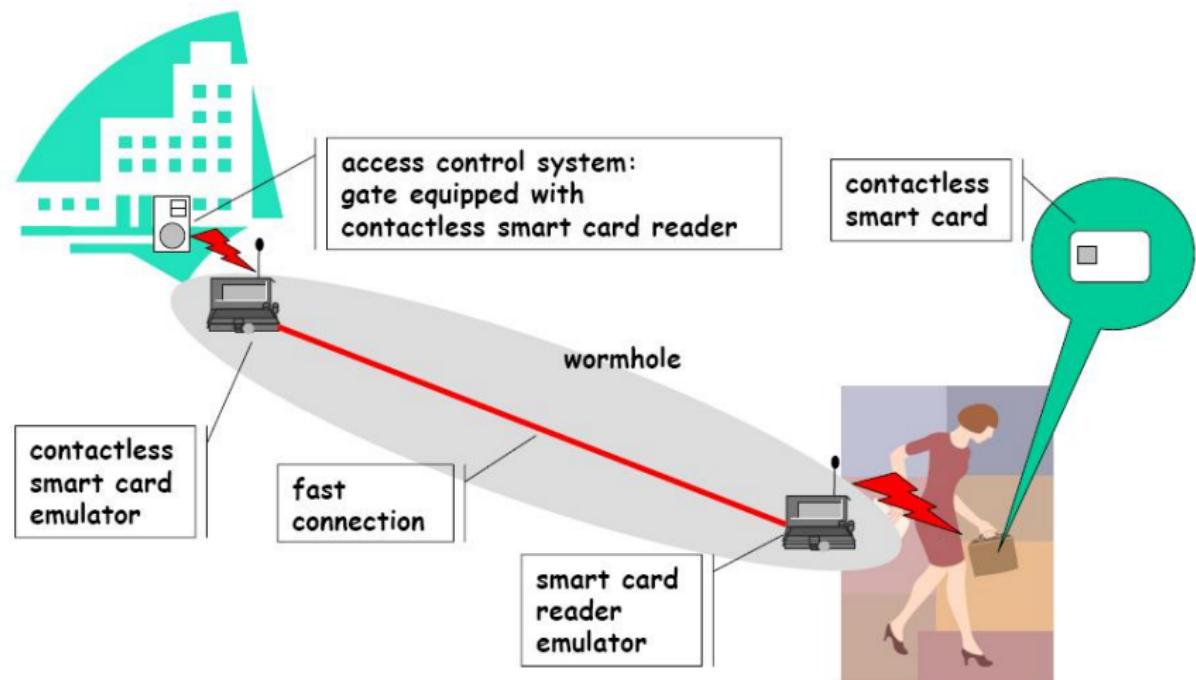

- ▶ Automatic analysis of cryptographic primitives.
- ▶ Formal analysis: e-exam, e-voting, e-reputation, e-auction ...
- ▶ WSN: Privacy, secure routing, IDS ...

Nowadays Security is Everywhere!

Due to the success of Computer Science.

Wormhole Attack

Hacking Pacemakers:

Manufacturers are still not putting security first when designing implantable medical devices (2012)

Paypal Attack

“Model-Based Vulnerability Testing of Payment Protocol Implementations”, Ghazi Maatoug, Frédéric Dadeau and Michael Rusinowitch, Hotspot 2014

Formal Verification Approaches

Designer

$$\frac{(x^2 f(2x+1) + 1)y_1 + e_2(x)y_2 + e_3(x)y_3}{x^2} = \frac{\left(\frac{x(x+2)}{2}\right)1 + 5x(x-1) + \left(\frac{x(x-1)}{2}\right)}{x^2}$$
$$= \frac{\left(\frac{x(x-1)(x+2)}{2}\right)1 + 5x(x-1) + \left(\frac{x(x-1)}{2}\right)}{x^2}$$
$$= \frac{x^2(y+6x+5) - 4y_2 - 4y_3}{11(x+6)^2 + x+9} = \frac{y_2 + 5x^2(y+6x+5) - 4y_3}{11(x+6)^2 + x+9}$$
$$= \frac{9x + \sqrt{5}(-9x^2 + 27x^2)\sqrt{5}(6x)^2 + 10x^2 - 4y_3}{11(x+6)^2 + x+9}$$
$$= \frac{9x + \sqrt{5}(-9x^2 + 27x^2)\sqrt{5}(6x)^2 + 10x^2 - 4y_3}{11(x+6)^2 + x+9}$$
$$= \frac{(1-x)(5)(-9x + \sqrt{5}(-9x^2 + 27x^2))}{11(x+6)^2 + x+9}$$

Motivations

Main Security Properties

Cryptographic protocols

Logical Attacks

Formal Verifications Tools

Conclusion

Traditional security properties

- ▶ Common security properties are:
 - Confidentiality or Secrecy: No improper disclosure of information
 - Authentication: To be sure to talk with the right person.
 - Integrity: No improper modification of information
 - Availability: No improper impairment of functionality/service

Authentication

"On the Internet, nobody knows you're a dog."

Mechanisms for Authentication

KNOW	HAVE	ARE	DO
			
Passwords ID Questions Secret Images	Token (Smart) Card Phone	Face Iris Hand/Finger	Behavior Location Reputation

Other security properties

- ▶ **Perfect Forward Secrecy (PFS)** is a property of key-agreement protocols that ensures that a session key derived from a set of long-term keys will not be compromised if one of the long-term keys is compromised in the future.
- ▶ **Non-repudiation** (also called accountability) is where one can establish responsibility for actions.
- ▶ **Fairness** is the fact there is no advantage to play one role in a protocol comparing with the other ones.
- ▶ **Privacy**

Anonymity: secrecy of principal identities or communication relationships.

Pseudonymity: anonymity plus link-ability.

Data protection: personal data is only used in certain ways.

e-services :

- ▶ e-voting
- ▶ e-auction
- ▶ e-examen
- ▶ e-reputation
- ▶ e-cash
- ▶ e-passport
- ▶ ...

Users expect more properties and security with electronic services!

Conclusion

Symmetric vs Asymmetric Encryption

Symmetric Encryption (DES, AES)

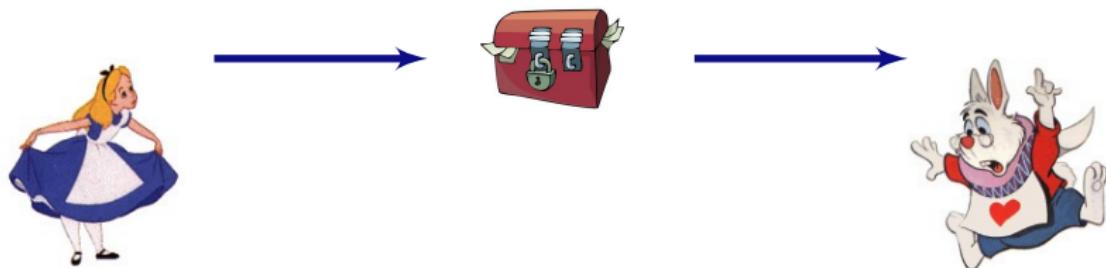

Asymmetric Encryption (RSA, Elgamal ...)

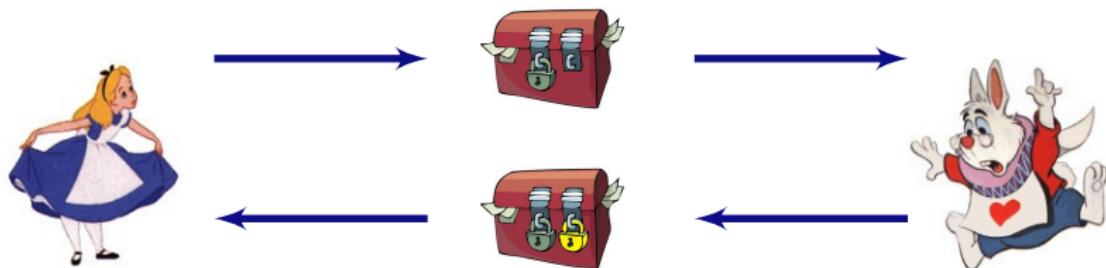

3-pass Shamir

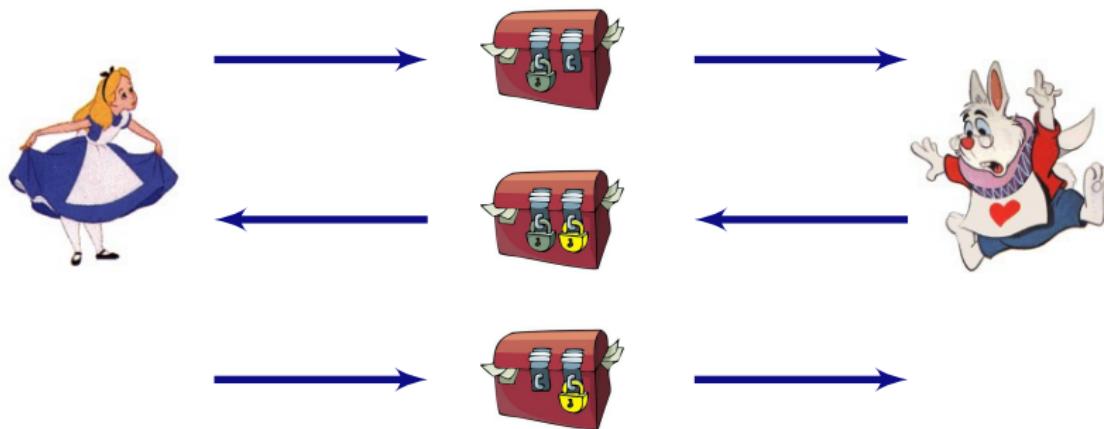

3-pass Shamir

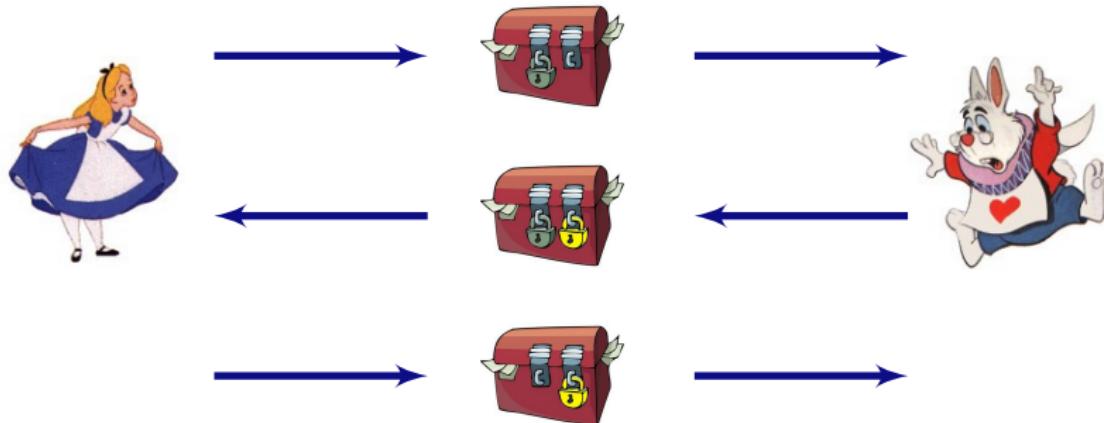

3-pass Shamir

3-pass Shamir

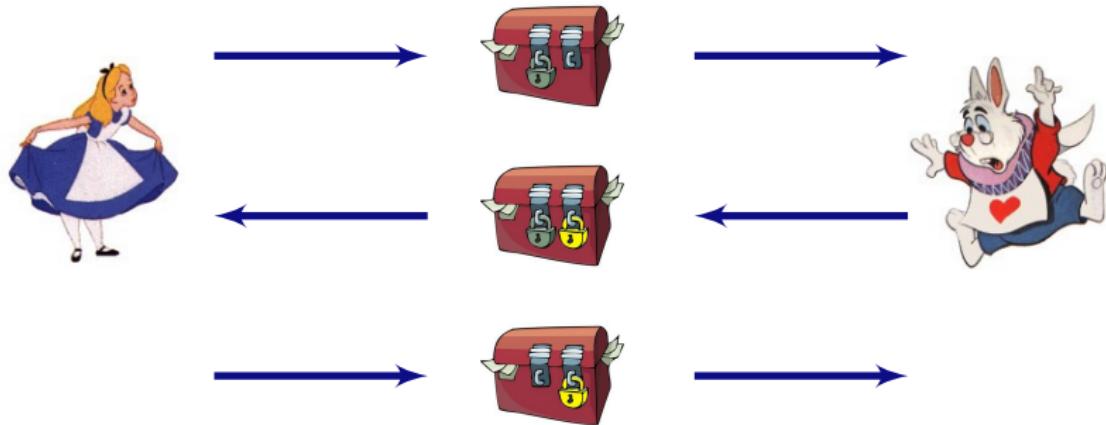

3-pass Shamir

Abstract Representation

1 $A \rightarrow B : \{m\}_{K_A}$

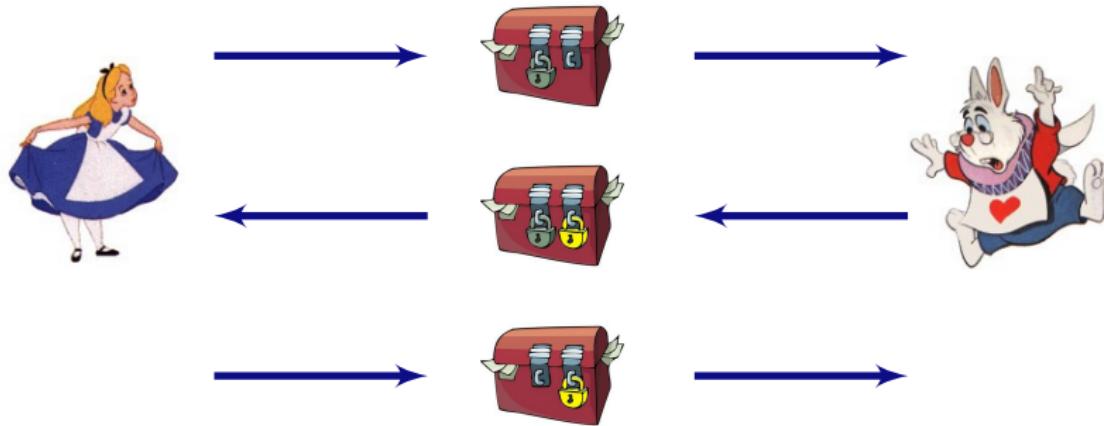

3-pass Shamir

Abstract Representation

$$\begin{array}{l} 1 \quad A \rightarrow B : \{m\}_{K_A} \\ 2 \quad B \rightarrow A : \{\{m\}_{K_A}\}_{K_B} \end{array}$$

3-pass Shamir

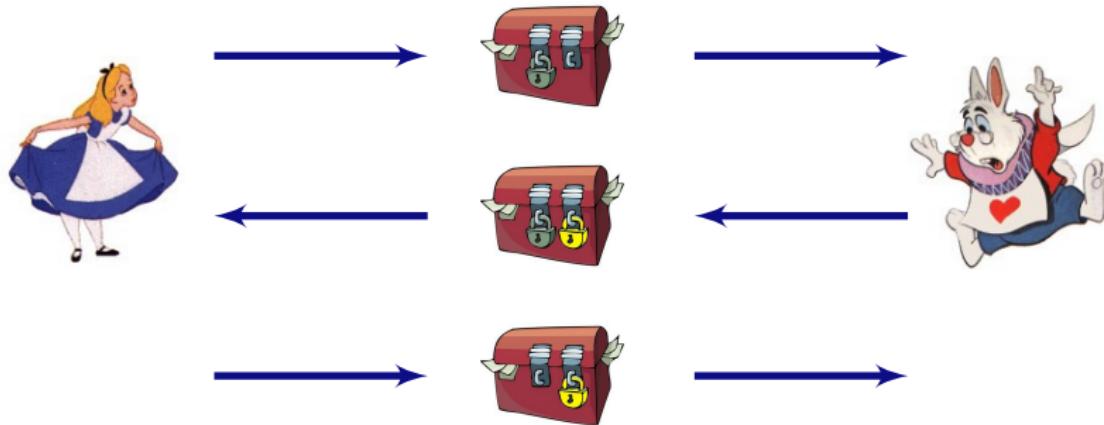

Abstract Representation

$$1 \quad A \rightarrow B : \{m\}_{K_A}$$

$$2 \quad B \rightarrow A : \{\{m\}_{K_A}\}_{K_B} = \{\{m\}_{K_B}\}_{K_A}$$

Commutative
Encryption

3-pass Shamir

Abstract Representation

- 1 $A \rightarrow B : \{m\}_{K_A}$ Commutative
- 2 $B \rightarrow A : \{\{m\}_{K_A}\}_{K_B} = \{\{m\}_{K_B}\}_{K_A}$ Encryption
- 3 $A \rightarrow B : \{m\}_{K_B}$

Example

Needham Schroeder Key Echange 1976

$$A \rightarrow B : \{A, N_A\}_{Pub(B)}$$
$$B \rightarrow A : \{N_A, N_B\}_{Pub(A)}$$
$$A \rightarrow B : \{N_B\}_{Pub(B)}$$

- ▶ Use cryptography
- ▶ Small programs
- ▶ Distributed

Outline

Motivations

Main Security Properties

Cryptographic protocols

Logical Attacks

Formal Verifications Tools

Conclusion

Logical Attack on Shamir 3-Pass Protocol (I)

Perfect encryption one-time pad (Vernam Encryption)

$$\{m\}_k = m \oplus k$$

XOR Properties (ACUN)

- ▶ $(x \oplus y) \oplus z = x \oplus (y \oplus z)$ **Associativity**
- ▶ $x \oplus y = y \oplus x$ **Commutativity**
- ▶ $x \oplus 0 = x$ **Unity**
- ▶ $x \oplus x = 0$ **Nilpotency**

Logical Attack on Shamir 3-Pass Protocol (I)

Perfect encryption one-time pad (Vernam Encryption)

$$\{m\}_k = m \oplus k$$

XOR Properties (ACUN)

- ▶ $(x \oplus y) \oplus z = x \oplus (y \oplus z)$ **Associativity**
- ▶ $x \oplus y = y \oplus x$ **Commutativity**
- ▶ $x \oplus 0 = x$ **Unity**
- ▶ $x \oplus x = 0$ **Nilpotency**

Vernam encryption is a **commutative encryption** :

$$\{\{m\}_{K_A}\}_{K_I} = (m \oplus K_A) \oplus K_I = (m \oplus K_I) \oplus K_A = \{\{m\}_{K_I}\}_{K_A}$$

Logical Attack on Shamir 3-Pass Protocol (II)

Perfect encryption one-time pad (Vernam Encryption)

$$\{m\}_k = m \oplus k$$

Shamir 3-Pass Protocol

- 1 $A \rightarrow B : m \oplus K_A$
- 2 $B \rightarrow A : (m \oplus K_A) \oplus K_B$
- 3 $A \rightarrow B : m \oplus K_B$

Passive attacker :

$$m \oplus K_A \quad m \oplus K_B \oplus K_A \quad m \oplus K_B$$

Logical Attack on Shamir 3-Pass Protocol (II)

Perfect encryption one-time pad (Vernam Encryption)

$$\{m\}_k = m \oplus k$$

Shamir 3-Pass Protocol

- 1 $A \rightarrow B : m \oplus K_A$
- 2 $B \rightarrow A : (m \oplus K_A) \oplus K_B$
- 3 $A \rightarrow B : m \oplus K_B$

Passive attacker :

$$m \oplus K_A \oplus m \oplus K_B \oplus K_A \oplus m \oplus K_B = m$$

Cryptography is not sufficient !

Example : Needham Schroeder Key Exchange

$$A \rightarrow B : \{A, N_A\}_{Pub(B)}$$
$$B \rightarrow A : \{N_A, N_B\}_{Pub(A)}$$
$$A \rightarrow B : \{N_B\}_{Pub(B)}$$

Cryptography is not sufficient !

Example : Needham Schroeder Key Exchange

$$A \rightarrow B : \{A, N_A\}_{Pub(B)}$$
$$B \rightarrow A : \{N_A, N_B\}_{Pub(A)}$$
$$A \rightarrow B : \{N_B\}_{Pub(B)}$$

Broken 17 years after, by G. Lowe

$$A \rightarrow I : \{A, N_A\}_{Pub(I)}$$
$$I \rightarrow B : \{A, N_A\}_{Pub(B)}$$
$$B \rightarrow I : \{N_A, N_B\}_{Pub(A)}$$
$$I \rightarrow A : \{N_A, N_B\}_{Pub(A)}$$
$$A \rightarrow I : \{N_B\}_{Pub(I)}$$
$$I \rightarrow B : \{N_B\}_{Pub(B)}$$

Cryptography is not sufficient !

Example : Needham Schroeder Key Exchange

$$A \rightarrow B : \{A, N_A\}_{Pub(B)}$$
$$B \rightarrow A : \{N_A, N_B\}_{Pub(A)}$$
$$A \rightarrow B : \{N_B\}_{Pub(B)}$$

Broken 17 years after, by G. Lowe

$$A \rightarrow I : \{A, N_A\}_{Pub(I)}$$
$$I \rightarrow B : \{A, N_A\}_{Pub(B)}$$
$$B \rightarrow I : \{N_A, N_B\}_{Pub(A)}$$
$$I \rightarrow A : \{N_A, N_B\}_{Pub(A)}$$
$$A \rightarrow I : \{N_B\}_{Pub(I)}$$
$$I \rightarrow B : \{N_B\}_{Pub(B)}$$

Computer-Aided Security

Outline

Motivations

Main Security Properties

Cryptographic protocols

Logical Attacks

Formal Verifications Tools

Conclusion

Necessity of Tools

- ▶ Protocols are small recipes.
- ▶ Non trivial to design and understand.
- ▶ The number and size of new protocols.
- ▶ Out-pacing human ability to rigourously analyze them.

GOAL : A tool is finding flaws or establishing their correctness.

- ▶ completely automated,
- ▶ robust,
- ▶ expressive,
- ▶ and easily usable.

Existing Tools: AVISPA, Scyther, Proverif, Hermes,
Casper/FDR, Murphi, NRL ...

Questions?

How can we find such attacks automatically?

- ▶ Models for Protocols
- ▶ Models for Properties
- ▶ Theories and Dedicated Techniques
- ▶ Tools
 - ▶ Automatic
 - ▶ Semi-automatic

Why is it difficult to verify such protocols?

- ▶ Messages: Size not bounded
- ▶ Nonces: Arbitrary number
- ▶ Intruder: Unlimited capabilities
- ▶ Instances: Unbounded numbers of principals
- ▶ Interleaving: Unlimited applications of the protocol.

Complexity

Complexity depends of intruder capabilities. In classical Dolev-Yao intruder model we (pair + encryption) we have the following results:

- ▶ Passive Intruder
Problem is polynomial
- ▶ Bounded Number of sessions
Problem is NP-complete
Tools can verify 3-4 sessions: useful to finds flaws ! OFMC, Cl-Atse, SATMC, FDR, Athena...
- ▶ Unbounded Number of sessions
Problem is in general undecidable
Tools are corrects, but uncomplete (can find false attacks, can not terminate) Proverif, TA4SP, Scyther.

Which tool for what ?

	Proverif	Scyther	OFMC	Cl-atse	TA4SP	SAT-MC
Secrecy	X	X	X	X	X	X
Authentication	X	X	X	X	X	X
Equivalence Obs	X					
Bounded nb S		X	X	X	X	X
Unbounded nb S	X	X			X	
Xor	x		X	X		
DH	x		X	X		
Fast	X	X				
User friendly		X				

Success Story of Formal Verification

Tools based on different theories for several properties

1995 Casper/FRD [Lowe]

2001 Proverif [Blanchet]

2003 Proof of certified email protocol with Proverif [AB]
OFMC [BMV]
Hermes [BLP]

Flaw in Kerberos 5.0 with MSR 3.0 [BCJS]

2004 TA4SP [BHKO]

2005 SATMC [AC]

2006 CL-ATSE [Turuani]

2008 Scyther [Cremers]

Flaw of Single Sign-On for Google Apps with SAT-MC [ACCCT]

Proof of TLS using Proverif [BFCZ]

2010 TOOKAN [DDS] using SAT-MC for API

2012 Tamarin [BCM]

Outline

Motivations

Main Security Properties

Cryptographic protocols

Logical Attacks

Formal Verifications Tools

Conclusion

Summary

5 points to bring home

- ▶ Security is everywhere (IoT)
- ▶ Security design is a global process
- ▶ Security = Cryptography + Properties + Adversaries
- ▶ Users have to be educated
- ▶ Computer-Aided Security (Tools)

Thank you for your attention.
